

SANDBAGS

SANDBAGS

Enviro-Pro's sandbags are made of polypropylene filled with sand and used for such purposes as flood and water control, Hazardous containment, soil erosion, fire control, roadway construction, barricades and compost sales. Sandbags are frequently utilized as weights for HDPE and LLPDE liner weights in windy conditons. Additionally, sandbags may be used for disposable ballast in gas balloons, counterweights for theater sets, weight training and traction for rear wheel drive vehicles. Sandbags are useful during emergencies when rivers threaten to over flood or a levee or dike is damaged.

- Bags are treated with UV inhibitors so they can withstand 1600 hours of ultra violet exposure.
- Each bag has a hemmed top and a tie string to close the bag.
- The size of each bag is 14" x 26".
- Customs bags are available.
- Bags are shipped full and ready to use.
